

Case Study

Robust Cloud Strategy:

AHEAD + Sharp Healthcare

Sharp Healthcare is one of San Diego's largest not-for-profit healthcare systems providing medical services in all fields of medicine across four acute care hospitals, three specialty hospitals, three medical groups, and a health plan. Seeking to develop a robust cloud strategy, Sharp partnered with AHEAD to ensure the success of its digital journey.

After a series of foundational engagements, working with the CIO to clarify the value of cloud migration and addressing concerns regarding cloud connectivity and performance with the usage of latency-sensitive applications, AHEAD crafted the right strategy for Sharps' cloud journey which included: network assessment, FinOps, cloud foundations/automation, EMR migration, and AWS Environment setup for Data and Analytics.

Over the past two years, AHEAD has worked in tandem with Sharp Healthcare to advance cloud initiatives and deliver precise outcomes.
